SUCTION CUPS

USER MANUAL

MODEL: GPS-1/GPS-2/GPS-1-10

We continue to be committed to provide you tools with competitive price.

"Save Half", "Half Price" or any other similar expressions used by us only represents an estimate of savings you might benefit from buying certain tools with us compared to the major top brands and does not necessarily mean to cover all categories of tools offered by us. You are kindly reminded to verify carefully when you are placing an order with us if you are actually saving half in comparison with the top major brands.

This is the original instruction, please read all manual instructions carefully before operating. VEVOR reserves a clear interpretation of our user manual. The appearance of the product shall be subject to the product you received. Please forgive us that we won't inform you again if there are any technology or software updates on our product.

SAFETY INSTRUCTION AND PRECAUTIONS

⚠WARNING:

Read this material before using this product. Failure to do so can result in serious injury.

1. This product is not a toy. Do not allow children to play with this item.
2. Use as intended only. Do not stand on the product.
3. Make sure the handle is not loose before each use.
4. Do not exceed the listed weight capacity.

Safety Instructions:

- 1.Keep product away from damp, wet, rainy, high temperature, fire, or direct sun-shining conditions.
- 2.Check for alignment and binding of all moving parts, broken parts or mounting fixtures, and other conditions that may affect proper operation.
- 3.Never let children handle the product, and Do not use the lifter as a dolly.
- 4.When serving, use only identical replacement parts. Use of any other parts will void the warranty.
- 5.Do not exceed the lifter's capacity.
- 6.Lifter should be used on non-porous materials with smooth, relatively flat surfaces.
- 7.Lifter can only be operated by manual for short distance.
- 8.Check for damaged parts. Before use, any part that appears damaged should be carefully checked to determine that it will operate properly and perform its intended function, and the surface of rubber pads should be cleaned up without dirt.
- 9.If there is any question about a condition being safe or unsafe, DO NOT use the product.

Product Use: Lifting and moving non-porous materials

Storage: When not in use, the product should be stored in a dry, not high temperature, without direct sun shining location to inhibit rust and wear out.

Operation Direction:

1. The principle of operation is by lever and pump action. The round suction cups are pressed onto the surface of the object to be lifted. The lever grips are squeezed together into position. The rubber pads are then securely clamped to the surface by vacuum so that the object can be lifted. To release, just flip back the levers.

2. The loaded surface needs to be smooth, relatively flat, and non-porous. Surfaces should be free of oil, grease, or water; otherwise, slipping can occur. Non-porous materials such as glass, metal, plastics, and polished stone are good examples.

OPERATION AS BELOW

1. Open the vacuum suction plastic box and check if the product and accessories are intact.

2. When operating, clean the surface of the object to be adsorbed with an anti-static cloth to ensure a smooth surface.

3. When operating, place the vacuum suction cup flat on the surface of the object to be adsorbed; lightly press the vacuum suction cup with your hand to ensure full contact between the rubber pad and the object's surface. Then press the inflation button until it is fully inflated and the red warning line is not visible.

4. After complete inflation, check the red warning line to see if it has retracted. If it has not retracted, then the object can be moved.

5. After the transportation process is completed, gently lift the deflation tongue or press the black deflation button to remove the suction cup.
