	mm	305	1270
W1	Inches	3.5	9
	mm	89	228
W2	Inches	---	13.7
	mm	---	349

ASSEMBLY AND USE

Set-Up

1. From new: Remove handle and bolt to side with provided screws.
2. Unscrew wing nut and remove flare from the centre of the unit.

Secure same wing nut on the centre stud.

3. Place flare on feeder end and fasten with screws and wing nuts provided.

4. your unit is now fully assembled.

Unit Placement

1. For the unit to operate properly. As a suggestion, the feeder can be adjusted to be 2-1/2 inches higher than the back end.

2. Place the unit in shallow water no more than the height of the sides.

3. Place shovel full of material in the feeder on top of the mat.

the material should immediately start flowing down the sluice box. 50% of the material is being trapped behind riffles while the other 50% washes down stream. (this is the proper flow & angle when this is achieved). Note: water flow is too slow if the unit fills with sand and gravel -you then must increase your water flow, angle or both to achieve the 50% being trapped and the 50% going downstream.

Removing Gold

1. Lift unit from water.

2. Loosen wing nut and remove riffle and expanded metal.

3. Remove carpet by rolling it up with ribs facing inward.

Place rolled carpet in a bucket filled with clean water to release gold concentrates. Roll carpet opposite direction and repeat.

4. Pan concentrates from the bottom of the bucket.

Reassembling

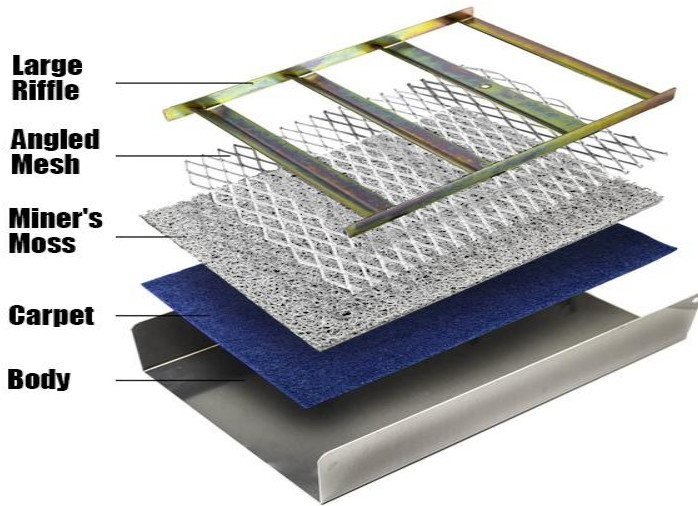

1. Replace carpet in the unit.

2. Replace expanded metal in over carpet, ensuring it is level with the end of the unit, Please see the picture below to ensure proper placement of expanded metal. (It is possible to put in backwards).

3. Place riffle assembly over expanded metal.

4. Expanded metal and riffle should be at the same angle.

5. Tighten with wing nut provided.

Storing Unit

1. Make sure carpet is dry before storing unit.
2. Remove feeder and replace screws and nuts in holes on feeder and return to center stud for storage.

3-piece folding design, Extremely portable, folding down in size by loosening the connecting wing nuts, it will pack right up into your backpack or 5 gallon bucket. You're ready to prospect for gold right out of the package. No assembly required.

Host

Tote bag

The newly designed Outdoor Gold Sluice Box Folding Aluminum Portable Gold Prospecting, 50 Inch. the lightweight, aluminium sluice box weighs just 7.5lbs and folds up to just 15" x 9", Extremely portable. simply by tightening the locking wingnuts. This takes care of the most common complaint about similar, cheaper models in that they would often fold up when you tried to pick them up out of the stream. allowing for easy portability that you can backpack this gold panning sluice box into any river, stream, creek or remote area anywhere. This is ideal for all experienced miners as well as beginner gold panning enthusiasts and adults.

Maximize the efficiency of gold exploration and mining operations. This product is developed by experienced prospectors and a professional team.

MAINTENANCE

1. Avoid prolonged exposure to the sun to avoid aging.
