10.When using the bed box elevator to lift the mattress, there should be no items other than the mattress on the bed, otherwise people may be injured

SAVE THESE INSTRUCTIONS

INSTRUCTIONS

	
1.Mounting position of the lift:the distance between the rear end of the lift and the backboard of the bed box is about 5cm. (Note:the installation position can be adjusted appropriately.)	2.The longest side bracket of the lift shall be the same level with the side board of the bed box
	
3. Open the lifter slightly to reveal the mounting hole, use the marking	4.Remove the lifter, punch holes in the marked position with the

pen to correspond to the bracket hole under the lifter. and mark the hole on the board.	electric dill, then install the lifter and tighten the screw.
	
5.After the lifter is installed in the bed box,support the lifter and install the air support.(note:stroke rod should be installed face down)	6. Press down the mounted lifter to complete closure, measure the installation distance from the bed to the lifter, confirm the installation hole position of the longest side bracket on the bed board, and make a hole mark. (note: There are many mounting holes in the lift; the number of mounting holes can be selected according to the actual situation. It is recommended to measure the mounting screws of the tail and front end of the lift and then install other holes to avoid drilling wrong holes.)

	7.Use the electric dill to punch holes on the bed board according to the mark.Place the lifter on the bed board.Correspond to the hole position,screw on and install it.
